

Package ‘betaDelta’

February 10, 2023

Title Confidence Intervals for Standardized Regression Coefficients

Version 1.0.0.9000

Description Generates confidence intervals for standardized regression coefficients using delta method standard errors for models fitted by `lm()` as described in Yuan and Chan (2011) <[doi:10.1007/s11336-011-9224-6](https://doi.org/10.1007/s11336-011-9224-6)> and Jones and Waller (2015) <[doi:10.1007/s11336-013-9380-y](https://doi.org/10.1007/s11336-013-9380-y)>.

BetaDelta	<i>Estimate Standardized Regression Coefficients and Sampling Covariance Matrix</i>
-----------	---

Description

Estimate Standardized Regression Coefficients and Sampling Covariance Matrix

Usage

BetaDelta(object, type = "mvn")

Arguments

- object Object of class lm.
- type Character string. If type = "mvn", use the multivariate normal-theory approach. If type = "adf", use the asymptotic distribution-free approach.

Value

Returns an object of class betadelta which is a list with the following elements:

- call** Function call.
- lm** Object of class lm.
- lm_process** Pre-processed object of class lm.
- type** Standard error type.
- gamma** Asymptotic covariance matrix of the sample covariance matrix.
- acov** Asymptotic covariance matrix of the standardized slopes.
- vcov** Sampling covariance matrix of the standardized slopes.
- est** Vector of standardized slopes.

Examples

```
object <- lm(QUALITY ~ NARTIC + PCTGRT + PCTSUPP, data = nas1982)
std <- BetaDelta(object)
# Methods -----
print(std)
summary(std)
coef(std)
vcov(std)
confint(std, level = 0.95)
## Differences of standardized regression coefficients -----
out <- dif(std)
print(out)
summary(out)
coef(out)
vcov(out)
confint(out, level = 0.95)
```

coef.betadelta	<i>Standardized Regression Slopes</i>
----------------	---------------------------------------

Description

Standardized Regression Slopes

Usage

```
## S3 method for class 'betadelta'
coef(object, ...)
```

Arguments

object	Object of class betadelta.
...	additional arguments.

Value

Returns a vector of standardized regression slopes.

Author(s)

Ivan Jacob Agaloos Pesigan

Examples

```
object <- lm(QUALITY ~ NARTIC + PCTGRT + PCTSUPP, data = nas1982)
std <- BetaDelta(object)
coef(std)
```

coef.difbetadelta	<i>Differences of Standardized Regression Slopes</i>
-------------------	--

Description

Differences of Standardized Regression Slopes

Usage

```
## S3 method for class 'difbetadelta'
coef(object, ...)
```

Arguments

object	Object of class difbetadelta.
...	additional arguments.

Value

Returns a vector of differences of standardized regression slopes.

Author(s)

Ivan Jacob Agaloos Pesigan

Examples

```
object <- lm(QUALITY ~ NARTIC + PCTGRT + PCTSUPP, data = nas1982)
std <- BetaDelta(object)
out <- dif(std)
coef(out)
```

confint.betadelta	<i>Confidence Intervals for Standardized Regression Slopes</i>
-------------------	--

Description

Confidence Intervals for Standardized Regression Slopes

Usage

```
## S3 method for class 'betadelta'
confint(object, parm = NULL, level = 0.95, ...)
```

Arguments

object	Object of class betadelta.
parm	a specification of which parameters are to be given confidence intervals, either a vector of numbers or a vector of names. If missing, all parameters are considered.
level	the confidence level required.
...	additional arguments.

Value

Returns a matrix of confidence intervals.

Author(s)

Ivan Jacob Agaloos Pesigan

Examples

```
object <- lm(QUALITY ~ NARTIC + PCTGRT + PCTSUPP, data = nas1982)
std <- BetaDelta(object)
confint(std, level = 0.95)
```

confint.difbetadelta	<i>Confidence Intervals for Differences of Standardized Regression Slopes</i>
----------------------	---

Description

Confidence Intervals for Differences of Standardized Regression Slopes

Usage

```
## S3 method for class 'difbetadelta'
confint(object, parm = NULL, level = 0.95, ...)
```

Arguments

object	Object of class difbetadelta.
parm	a specification of which parameters are to be given confidence intervals, either a vector of numbers or a vector of names. If missing, all parameters are considered.
level	the confidence level required.
...	additional arguments.

Value

Returns a matrix of confidence intervals.

Author(s)

Ivan Jacob Agaloos Pesigan

Examples

```
object <- lm(QUALITY ~ NARTIC + PCTGRT + PCTSUPP, data = nas1982)
std <- BetaDelta(object)
out <- dif(std)
confint(out, level = 0.95)
```

dif	<i>Differences of Regression Slopes</i>
-----	---

Description

Differences of Regression Slopes

Usage

```
dif(object, ...)

## S3 method for class 'betadelta'
dif(object, ...)
```

Arguments

object	Object used to select a method.
...	additional arguments.

nas1982

1982 National Academy of Sciences Doctoral Programs Data

Description

1982 National Academy of Sciences Doctoral Programs Data

Usage

nas1982

Format

Ratings of 46 doctoral programs in psychology in the USA with the following variables:

QUALITY Program quality ratings.

NEACUL Number of faculty members in the program.

NGRADES Number of program graduates.

PCTSUPP Percentage of program graduates who received support.

PCTGRT Percent of faculty members holding research grants.

NARTIC Number of published articles attributed to program faculty member.

PCTPUB Percent of faculty with one or more published article.

print.betadelta

Print Method for an Object of Class betadelta

Description

Print Method for an Object of Class betadelta

Usage

```
## S3 method for class 'betadelta'  
print(x, alpha = c(0.05, 0.01, 0.001), digits = 4, ...)
```

Arguments

x	Object of class betadelta.
alpha	Significance level.
digits	Digits to print.
...	additional arguments.

Value

Returns a matrix of standardized regression slopes, standard errors, test statistics, p-values, and confidence intervals.

Author(s)

Ivan Jacob Agaloos Pesigan

Examples

```
object <- lm(QUALITY ~ NARTIC + PCTGRT + PCTSUPP, data = nas1982)
std <- BetaDelta(object)
print(std)
```

print.difbetadelta	<i>Print Method for an Object of Class difbetadelta</i>
--------------------	---

Description

Print Method for an Object of Class difbetadelta

Usage

```
## S3 method for class 'difbetadelta'
print(x, alpha = c(0.05, 0.01, 0.001), digits = 4, ...)
```

Arguments

x	Object of class difbetadelta.
alpha	Significance level.
digits	Digits to print.
...	additional arguments.

Value

Returns a matrix of standardized regression slopes, standard errors, test statistics, p-values, and confidence intervals.

Author(s)

Ivan Jacob Agaloos Pesigan

Examples

```
object <- lm(QUALITY ~ NARTIC + PCTGRT + PCTSUPP, data = nas1982)
std <- BetaDelta(object)
out <- dif(std)
print(out)
```

summary.betadelta	<i>Summary Method for an Object of Class betadelta</i>
-------------------	--

Description

Summary Method for an Object of Class betadelta

Usage

```
## S3 method for class 'betadelta'
summary(object, alpha = c(0.05, 0.01, 0.001), digits = 4, ...)
```

Arguments

object	Object of class betadelta.
alpha	Significance level.
digits	Digits to print.
...	additional arguments.

Value

Returns a matrix of standardized regression slopes, standard errors, test statistics, p-values, and confidence intervals.

Author(s)

Ivan Jacob Agaloos Pesigan

Examples

```
object <- lm(QUALITY ~ NARTIC + PCTGRT + PCTSUPP, data = nas1982)
std <- BetaDelta(object)
summary(std)
```

`summary.difbetadelta` *Summary Method for an Object of Class difbetadelta*

Description

Summary Method for an Object of Class difbetadelta

Usage

```
## S3 method for class 'difbetadelta'
summary(object, alpha = c(0.05, 0.01, 0.001), digits = 4, ...)
```

Arguments

<code>object</code>	Object of class difbetadelta.
<code>alpha</code>	Significance level.
<code>digits</code>	Digits to print.
<code>...</code>	additional arguments.

Value

Returns a matrix of standardized regression slopes, standard errors, test statistics, p-values, and confidence intervals.

Author(s)

Ivan Jacob Agaloos Pesigan

Examples

```
object <- lm(QUALITY ~ NARTIC + PCTGRT + PCTSUPP, data = nas1982)
std <- BetaDelta(object)
out <- dif(std)
summary(out)
```

`vcov.betadelta` *Sampling Covariance Matrix of the Standardized Regression Slopes*

Description

Sampling Covariance Matrix of the Standardized Regression Slopes

Usage

```
## S3 method for class 'betadelta'
vcov(object, ...)
```

Arguments

object Object of class betadelta.
 ... additional arguments.

Value

Returns a matrix of the variance-covariance matrix of standardized slopes.

Author(s)

Ivan Jacob Agaloos Pesigan

Examples

```
object <- lm(QUALITY ~ NARTIC + PCTGRT + PCTSUPP, data = nas1982)
std <- BetaDelta(object)
vcov(std)
```

vcov.difbetadelta	<i>Sampling Covariance Matrix of Differences of Standardized Regression Slopes</i>
-------------------	--

Description

Sampling Covariance Matrix of Differences of Standardized Regression Slopes

Usage

```
## S3 method for class 'difbetadelta'
vcov(object, ...)
```

Arguments

object Object of class difbetadelta.
 ... additional arguments.

Value

Returns a matrix of the variance-covariance matrix of differences of standardized regression slopes.

Author(s)

Ivan Jacob Agaloos Pesigan

Examples

```
object <- lm(QUALITY ~ NARTIC + PCTGRT + PCTSUPP, data = nas1982)
std <- BetaDelta(object)
out <- dif(std)
vcov(out)
```
