BetaDelta	Estimate Standardized Regression Coefficients and Sampling Covariance Matrix
	ance Matrix

Description

Estimate Standardized Regression Coefficients and Sampling Covariance Matrix

Usage

```
BetaDelta(object, type = "mvn")
```

Arguments

object Object of class 1m.

type Character string. If type = "mvn", use the multivariate normal-theory approach.

If type = "adf", use the asymptotic distribution-free approach.

Value

Returns an object of class betadelta which is a list with the following elements:

call Function call.

type Standard error type.

beta Vector of standardized slopes.

vcov Sampling covariance matrix of the standardized slopes.

n Sample size.

p Number of regressors.

df n-p-1 degrees of freedom
